

2018 Potter County Conservation District

# Tree Seedling Sale

Support conservation efforts, enjoy flowering and fruit producing trees, and improve wildlife habitat in your own backyard!

Proceeds contribute to education efforts of the Potter County Conservation District such as events, scholarships, educational programs and workshops, and equipment. **Thank you for your support!**

**Questions: call 814-274-8411 ext. 4 between the hours of 8:00 AM – 4:30 PM Monday through Friday  
OR email Outreach Advisor Emily Shosh at [e.shosh@pottercd.com](mailto:e.shosh@pottercd.com)**

## *Red Fuji Apple*

Semi-dwarf, \$18 per 4-5 foot tree

With its sweet/tart flavor, the Fuji Apple is a favorite fresh eating apple that is crisp, firm, and juicy. Excellent taste. Boasts beautiful red-colored skin and is medium in size. Produces large yields that ripen late season. Also great for cider. Reaches about 12-15 feet at full maturity. Not drought tolerant, may require watering. Not self-pollinating, requires complimentary variety to bear fruit.

## *Granny Smith Apple*

Semi-dwarf, \$18 per 4-5 foot tree

Large multipurpose apple good for fresh eating, sauce and juice. Fruit is green, very tart, and crisp. The go-to apple for baking and in pies. Reaches about 12-15 feet at full maturity. Not drought tolerant, may require watering. Not self-pollinating, requires complimentary variety to bear fruit.

## *Sekel Pear*

Semi-dwarf, \$20 per 4-5 foot tree

One of the smallest and sweetest of pear varieties. Great for baking, eating, and canning, keeps very well. Tree reaches 12-15 feet at full maturity. Not self-pollinating, requires complimentary variety to bear fruit.

## *Bartlett Pear*

Semi-dwarf, \$20 per 4-5 foot tree

A prime canning, eating, and baking fruit. Serves as the standard by which all other pears are measured. Pears will keep well. Grows at a faster rate and does best with full sun. Reaches 12-15 feet at full maturity. Especially sensitive to urban conditions and salts. Not drought tolerant and may require watering and extra care in dry conditions.

## Black Spruce - *Picea Mariana*

Available Size: 5-10 inches

Black spruce is a narrow evergreen tree with a spire-like crown, and reaches up to 50 feet in height. It has dark, bluish-green needles, and upturned branches. Pine cones are dark purple ripening red-brown, produced in dense clusters in the top of the tree. It is an excellent choice for wet sites. Twigs, leaves and seeds are important wildlife food. Very valuable as nesting sites for birds. Deer-resistant!

## The trees listed on this page serve as great replacements for the ever-popular Colorado Blue Spruce (*Picea Pungens*)

Blue Spruce trees have been sought after in our area for their beautiful blue-green needles. Unfortunately, the species has been aggressively affected in the past decade by the Cytospora Canker disease. The conifer varieties available **on this page** not only offer great benefits to you and wildlife, they offer attractive coloration similar to the Blue Spruce. Also, these trees have not been known to be affected by the Cytospora disease.

**Please contact us or your district forester for more information about Cytospora in Blue Spruce.**

Pictured above are the devastating effects of the Cytospora Canker on a Blue Spruce

## Concolor Fir - *Abies Concolor*

Available Size: 8-12 inches

Features a height of about 50 feet and needles that are bluish or silvery-green and roughly 1½-3" in length.. Yields oblong cones 3-6" in length that start out olive green, turning purplish and then brown at maturity. Can do a reasonably good job as a windbreak tree. Grouse favor buds and needles and find white fir a good roosting tree. The seeds of pinecones are eaten by squirrels, rodents, chickadees. May require some protection from deer browsing.

## Norway Spruce - *Picea Abies*

Available Size: 12-18 inches

Norways have many uses including lumber, Christmas trees and landscape specimen trees. Its dense branching pattern and tolerance of soil variations has also made it a popular tree for windbreaks. Grows to a height of 40–60' and a spread of 25–30' at maturity. They are important winter cover for deer and small game including grouse, hare, and woodcock. Song birds and fur bearers also frequent these forest types.

## Red Maple - *Acer Rubrum*

Available Size: 10-18 inches

Red maple is one of the best named of all trees, featuring something red in each of the seasons—buds in winter, flowers in spring, leafstalks in summer, and brilliant foliage in autumn. One of the first trees to flower in Spring, attracting early bees and hummingbirds. The tree's pageant of color, its fast growth, and tolerance to a wide range of soils makes it a widely planted favorite. Grows to a height of 40–60' and a spread of around 40' at maturity.

## Sargent Crabapple - *Malus Sargentii*

Available Size: 12-24 inches

This compact landscape tree is a spring star, with abundant clusters of fragrant white flowers making their appearance in May. Great for smaller yards, growing to a maximum height of 10 feet. Yields pea-sized fruit that starts out greenish-yellow which later turns bright red, hanging in clusters and persisting into winter. The fruit is especially favored by cedar waxwings, robins, and grosbeaks. Other wildlife may enjoy the fruit as well. Can be used to help pollinate some apple tree varieties.

## Red Oak - *Quercus Rubra*

Available Size: 18-24 inches

A sturdy, fast-growing, handsome shade tree. Fast growth to 60 - 70 feet with equal spread. Grows best in sandy to rich loamy soil in full sun. Acorns are bitter but eaten by deer and squirrels. Tolerant of urban conditions such as higher amounts of salts and Sulphur dioxide. Very valuable as a timber tree. Leaves take on red hues midsummer to early autumn.

## Chinkapin Oak - *Quercus muehlenbergii*

Available Size: 18-24 inches

A wildlife favorite for its abundant acorns, which will be produced within 10-15 years! This oak does well in many different soils, but requires full sun. It reaches a height of 40-50 feet and spread of 50-60 feet, making it a beautiful shade tree option.

## Sycamore - *Platanus occidentalis*

Available Size: 6-12 inches

The Sycamore is a tall, handsome tree that does well in wetter riparian zones, but also an ideal shade tree in yards. The Sycamore provides food and nesting habitat for birds including red-tailed hawks, woodpeckers, and hummingbirds. It's notable characteristic is the smooth, mottled, beautiful bark. A towering tree, it reaches 40-100' and a spread of 40-70' at maturity.

## Old Fashioned Lilac - *Syringa Vulgaris*

Available Size: 12-24 inches

Dense, vigorous growth to 15 feet. Produces very fragrant flowers light to deep lavender in color which bloom during late spring. Old flowers should be cut (or, "deadheaded") from the plant as soon as the flowers fade, and pruning on alternate years may help overall growth. Loved by butterflies and bees. Grows best in groups with 6 feet between plants and in full sun or partial shade.

## American Elder - *Sambucus Canadensis*

Available Size: 18-24 inches

Vigorous fast growing shrub to 10 feet in height. Bluish-black berries excellent for making jams and wine. Berries are also a great food source for birds and other wildlife. Does not prefer a certain soil type or drainage, and is relatively wetland tolerant. Requires partial shade to full sun. At least two shrubs are required for proper pollination and berry production.

## ORDERS AND PAYMENTS ARE DUE BY MARCH 1ST, 2019

Please send your order and payment by mail or in person to our office, 107 Market Street Coudersport, PA 16915. We are able to accept cash or checks, which can be made payable to the Potter County Conservation District.

Pick up will be April 5th, 2019 11 AM - 4PM at our office. Bring a copy of your order forms to verify upon pick up. Refunds for unavailable varieties will be issued if necessary.

**The District may assist in providing planting guidance, but cannot be responsible for unsuccessful trees or possible discrepancies caused by tree suppliers.**
